

What is claimed is:

1. A process, comprising a thermal treatment of sodium percarbonate immediately following a drying step subsequent to a production process of sodium percarbonate wherein the thermal treatment is performed for a time of at least 2 minutes at a temperature from 70 to 120°C and ambient air surrounding the sodium percarbonate is continuously replaced.
2. The process according to Claim 1, wherein the sodium percarbonate is coated.
3. The process according to Claim 1, wherein the temperature is from 80 to 95°C.
4. The process according to Claim 1, wherein the temperature is from 85 to 95°C.
5. The process according to Claim 1, wherein the time is from 5 to 60 minutes.
6. The process according to Claim 1, wherein the time is from 10 to 60 minutes.
7. A sodium percarbonate particulate made by the process according to Claim 1.
8. The process according to Claim 1, wherein
the sodium percarbonate is in a fluidized layer;
atmospheric air is heated to a treatment temperature from 70 to 120°C; and
the atmospheric air is passed through the fluidized layer.
9. The process according to Claim 8, wherein the atmospheric air is heated by flue gases.
10. The process according to Claim 8, wherein the thermal treatment is performed in a fluidized bed.
11. A process, comprising a thermal treatment of sodium percarbonate immediately following a drying step subsequent to a production process of sodium percarbonate

10025577-122601

wherein the thermal treatment is performed at a temperature from 70 to 120°C and ambient air surrounding the sodium percarbonate is continuously replaced.

12. The process according to Claim 11, wherein the sodium percarbonate is coated.
13. The process according to Claim 11, wherein the temperature is from 85 to 95 °C.
14. The process according to Claim 11, wherein the sodium percarbonate is treated for a time of at least 2 minutes.
15. The process according to Claim 11, wherein the sodium percarbonate is treated for a time from 10 to 60 minutes.
16. The process according to Claim 11, wherein
the sodium percarbonate is in a fluidized layer,
atmospheric air is heated to a treatment temperature from 70 to 120°C for a time of at least 2 minutes; and
the atmospheric air is passed through the fluidized layer.
17. The process according to Claim 16, wherein the atmospheric air is heated by flue gases.
18. The process according to Claim 16, wherein the thermal treatment is performed in a fluidized bed.
19. A sodium percarbonate particulate made by the process according to Claim 11.
20. A process, comprising a thermal treatment of sodium percarbonate for a time of at least 2 minutes at a temperature from 70 to 120°C, wherein ambient air surrounding (the particles) is continuously replaced.
